interview warmup

Can you please tell me a bit about yourself?

My name is Lisa Brian. I'm a software engineer. With a lot of experience in Grass platform have development to the flatter. I also do also available to passion in. ux and Graphics design Yeah, one thing that inspires me the most and what if I do? is that I love designing and Developing experiences that improve people's lives.

① Situational question

Tell me about a time when you delivered results despite a challenging environment or context. What was the situation, what was your goal, and what were the results?

about the Sun Being a freelancer. I've had opportunity to interact with a lot of clients and yeah. Most cases is very challenging. Of course. To deliver results cuz I'm plans have like short time frames for their products. But usually what I do I create it to do list. with in order priority most cases when I have many clients, I now follow The the order I organize them is first come first Serbia. otherwise, I look at complexity of the problem at hand so that I finish all the simple ones first Yeah, then up next time I deliver. Simple and then start on the hard disk. for beneficence so of course the previous situation I had to deliver a system. Not the client to Dinesh the shortest thing possible. so of course I deleted by the system, but I had to use a number of simple tools use that simplifier I'm listening now. Like when I'm coding I use a iTunes tell me with a simple tasks that are In the code so that I don't

have to repeat. them each and every time then Of course with that I do a lot of planning and researching online find a similar problems. Yeah.

(i) Technical question

3/5

What is the role and purpose of a mockup?

Your answer

I will look UPS. Emo copy just shows them. Visual bit of the system or up like how it should look like. Usually from my previous experience with clients and other projects I've worked on. Mockups I just used to gather feedback before we start on the actual code. So this mock-ups are what I should do today clients. What other members of the team we do iterations in the mock up? So that by the time we start coding everything is set. And we can deliver our best in time without doing other changes. So basically insurance I can say more cups. I just get them tools to developers. They're like actually an intermediary between developers and designers, whereby the design that gives them up to the developer, and from letting the face Did verpa can start from there they couldn't process. So many it is just what about visualizing the system?

(i) Situational question

4/5

Tell me about a time a user journey map was helpful and why.

Is it getting my phone? I use Okay. From my experience working on the number of projects. So use them Jenny mobs. They just help me to know the flow of the app. like after this this should follow And after this this should

follow something like that. this is a journey map is just A gate took me understand the user. And what they need? So that when I'm sending the UI I should base on that. and I'm able to Deliver exactly what the user needs cousin when we are designing this systems. Their user-centric. So use the first thing I just follow so using any Maps. Yes, help me to know what they use a minute at the given time. And so that's when I'm designing it. I put that into question.

(i) Background question

5/5

Please tell me why you would be a good fit for this role.

Your answer

from my experience, of course with the number of movement Frameworks flooding particular and expecting that So why would be a good fit for this road is? Because I have all the technical expertise needed by the company by take this. To deliver their products because I checked on the job description when they take this Courier site. and if only a number of Requirements which I already qualify so that makes me a good fit for this job because I have over 95% of the requirements needed to work on this road. This kind they take this company first starting from State Management. I saw the State Management. Going to the seamless back and I use Firebase and I hope so. I think this is Firebase for that or I want to see the number of apis. So in case he's in the go to Solutions protectors we can use apis. I've worked on APS before that was on Main Time Project then I'm also good. I'm a good team leader. How cartoons discussions presentation so that makes me a good fit for this world too so that I can be able to communicate and engage with my other team members as regarding that. And also from my other experience in ux design and Graphics design, I can easily relate to so the design team so that we can come up with a visually appealing system that can satisfy a customer needs.
